User Stories Team 4

Users: People that are logged in
Guests: People that are not logged in

Functional:

As a user, I want to save a post in order to view it later. Guests can not save any posts.

As a user, I want to add tags, such as "Restaurant", "Outdoor", "Culture" to my posts in order to group related posts.

As a user, I want to be able to add comments to posts in order to share my opinion.

As an admin, I want to be able to delete posts and comments in order to get rid of any inappropriate content.
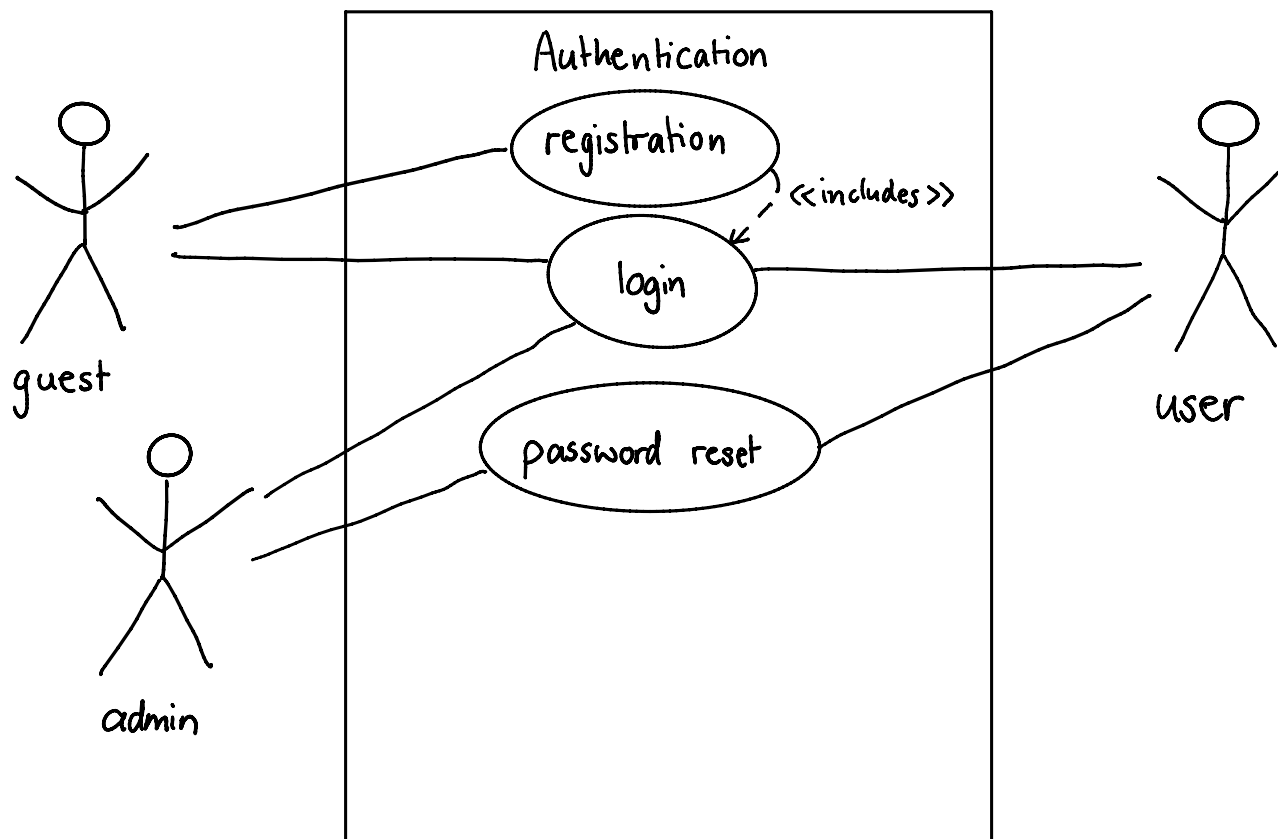

Non-functional:

As a user, I want my private data (such as my email address) to be hidden from other users in order to keep some privacy.

As a user, I want my data to be fully erased after deleting my account in order to keep privacy.

As a guest, I want the page to be loaded in less that 2 seconds in order not to waste my time and to stay sane.

As a site owner, I want my guests to fill out a captcha when registering in order to avoid having my site spammed with bots.

Use case descriptions:

Registration: Creates a new user name and password which is saved in the database. After registration a user is automatically logged in.
Login: Gives the user an access token if username and password are correct.
Password reset: Sends the guest a link which upon click enables them to choose a new password.
